EDUCATION

Pimpri Chinchwad College of Engineering and Research

Pune, India

B.E. in Computer Engineering, CGPA: 8.89/10

2024 – 2028

PROJECTS

Polymarket-Style Prediction Market | *TypeScript, Node.js, WebSockets*

- Built a prediction-market clone implementing a limit order book from scratch, matching bids and asks by price-time priority
- Modeled binary-outcome market mechanics: order placement, cancellation, trade matching, and market resolution/settlement
- Designed the matching engine and order book as isolated, independently testable TypeScript modules
- Used real-time updates to reflect live order book and price changes to connected clients

Draw-App – Collaborative Whiteboard | *Next.js, WebSockets, Prisma, JWT, Zod*

- Built an Excalidraw-style collaborative drawing app inside a pnpm/Turborepo monorepo with shared packages across frontend and backend
- Implemented real-time canvas sync over WebSockets with JWT-authenticated sessions and Zod-validated payloads
- Debugged and resolved cascading backend issues across Prisma schema migrations, async/await race conditions, and database connection handling

Real-Time Chat Application | *React (Vite), Express.js, TypeScript, Socket.io*

- Shipped a real-time messaging app with a React/Vite frontend and Express backend, using Socket.io for bidirectional message delivery
- Built a Shadcn/ui-based dark-themed interface in a fully typed TypeScript codebase

AyurSutra – Panchakarma Centre Management System | *Next.js, PostgreSQL* | Smart India Hackathon

- Built a centre-management platform for Panchakarma clinics as part of a national-level Smart India Hackathon team submission
- Designed the PostgreSQL data model and Next.js frontend for patient scheduling and clinic operations

OPEN SOURCE

airvynd-monorepo-template | *Turborepo, pnpm, Node.js* | [GitHub](#)

- Built and published a CLI scaffolding tool that generates a Turborepo-based pnpm monorepo structure for new projects

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C++, HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS

Backend: Node.js, Express.js, Socket.io, REST APIs

Databases: PostgreSQL, MongoDB, MySQL, Prisma ORM

Tools: Git, GitHub, JWT, Zod, Turborepo, pnpm workspaces

COMPETITIVE PROGRAMMING

Solved 300+ Data Structures & Algorithms problems in C++ across LeetCode and Codeforces — [Codolio profile](#)

ACTIVITIES & INTERESTS

Football: Represented college at the intercollegiate level

Blockchain: Exploring blockchain and Web3 technologies
